[Hiring manager or team]

[Company]

[Role]

Hello [Hiring manager or team],

I am applying for the [Role] position because it sits at the intersection of [specific problem from the opening] and the kind of end-to-end systems work I have been building publicly. My portfolio spans AI-agent infrastructure, compiler and language tooling, real-time graphics and color, verification, developer documentation, and operations. The consistent pattern is that I can enter an unfamiliar system, map its moving parts, build the working surface, and leave behind tests, documentation, and evidence another person can use. The most relevant proof for this role is [one or two specific projects]. In [project], I [specific action and bounded result]. In [project], I [specific action and bounded result]. These are public, runnable artifacts rather than portfolio-only descriptions: [direct links].

I also bring experience outside a conventional software path. Technical networking support, freelance technical and compliance writing, customer-facing operations, and field leadership have made me comfortable communicating with different audiences, working under ambiguity, and owning the last mile from a technical result to something people can actually operate.

I would welcome the chance to discuss how I could help [Company] with [role-specific outcome]. Thank you for considering my application.

Zain Dana Harper

Tailoring requirements before use:

1. Replace every bracketed field.
2. Open with the target's actual problem, not a generic enthusiasm statement.
3. Select no more than two proof points that directly match the opening.
4. Preserve product maturity and measured/estimated boundaries.
5. Keep the final letter under one page.
